Education

Applied Computer Science, B.Sc.   **2022 - 2025**

OsloMet – Oslo Metropolitan University   Bislett, Oslo

- Bachelor's degree in applied computer science with main focus on programming.
- <u>Course work covered in the degree:</u> Interaction design & prototyping, object-oriented programming (Java), Web development (HTML/CSS), IoT, Database handling, SQL, Web programming (JS), HCI, Systems development, Visualization, Software testing (ISTQB), Algorithms and data structures, Operating systems, Computer Security, Discrete Mathematics, Web applications (C, React), Resource-efficient programs.

ICT-service   **2017 - 2020**

Mailand upper secondary school   Lørenskog, Akershus

- ICT-oriented subject, with general university admissions certification.
- Grade average: 5,1/6. Activities: Student council representative.

Language and skills

- **Language:** Norwegian (native), English (fluent), German (limited)
- **Programming languages and frameworks:** HTML, CSS, Python, C, C++, JS (JQuery, React), PHP, SQL, .net, ARM Assembly
- **Technical skills:** Web design (UI/UX), Full-stack development, database handling, Windows Server (AD, DHCP, DNS), physical and digital prototyping, MMI, Microsoft Office, Maven
- **General skills:** Leadership, communication, Human Resources, teamwork, payroll/wage management, driver's license class. B.

Projects *a few select projects*

Software testing project | Java, HTML, CSS, unit testing, integration testing, system testing   **2024**

- Large project in subject "Software Testing", which builds on the industry standards of software testing (ISTQB). The project received a score of 100/100. I was responsible for the system testing, but also assisted in the unit testing portion.
- Link to project report *(in Norwegian)*

Portfolio website | HTML, CSS, JS   **2023**

- Portfolio website, made from scratch in HTML, CSS, & JS. Simple design.
- Link to website
- GitHub link

Web programming project | HTML, JS, Java, SQL, Maven   **2023**

- Project developed in Java, JS, HTML, with database handling and SQL. A simple program to register, edit, and delete tickets in a system. The project was a part of the subject "Web programming" and was given a score of 96/100.
- GitHub link

HabbGames | HTML, CSS, JS, PHP, SQL   **2017**

- HabbGames was a fun little website I created when I was 15 years old, it was the first ever "full-stack" program I made - without knowing what that meant at the time. The application consisted of a user-system with login/logout functionality, had a forum page, article-pages, and many more functions. It was used as a Habbo-co-page - Habbo is/was a popular online RPG-game. I don't have a lot of code or anything from the time of creating the website, but I have a few pictures and lots of memories. I decided to include this as a project of mine, as it is my first ever working application.
- Photos of the project

I have more projects on my portfolio-website and my GitHub-account, if that is something you're looking for.

Work experience

Shift leader (previously Ass. Restaurant manager)   **Oct. 2020 – current**
McDonald's, fulltime/parttime   Lillestrøm, Akershus

- I started as a restaurant worker in October 2020, before becoming ass. shift leader in 2021, and then shift leader in March 2022, eventually becoming training manager and assistant restaurant manager in November 2022. In 2024 I decided to quit being an assistant manager and instead become a part-time shift leader to focus on finishing my bachelor's degree.
- I have attended multiple leadership courses at McDonald's HQ in Oslo, like "Developing the Leader In Me" (DLIM), "Advanced Shift Leadership" (ASL) and "Shift Leadership transitions" (SLT). These courses are required to become assistant manager, the courses contain multiple exercises and teachings in leadership and communication – I have learned a lot from these courses that I still use today in my current projects.
- A few of my tasks at McDonald's have been personnel/HR, creating schedules in line with the provisions of the "Act relating to the working environment" of Norway, payroll/wage management, responsible for development in employees, daily/weekly/monthly control of the restaurant.
- Before becoming shift leader and assistant manager at McDonald's, I was voted shop steward by me co-workers and both employee of the moth and the quarter by my leaders.
- [Reference letter from my previous restaurant manager from 2023](#) *(in Norwegian)*.

ICT-service worker / IT-consultant   **Jan. 2018 – Aug. 2019**
Develop AS, internship/summer job   Skøyen, Oslo

- Develop AS was a small IT-consultant company in Skøyen, Oslo, under the "Varde Hartmark" group. I worked here interning through year 1 and 2 of upper sec. school, as a part of my education. I also worked full time in the summers of 2018 and 2019.
- At Develop, I got to participate in exciting projects both in-house and outsourced project, tailing actual IT-consultants in the company – this was my first meeting with the IT-development world. I got to contribute to a few fun projects here, like an application called "Inventory Gadget Tracker" and a SOS service for Nedre Follo municipality in Akershus.
- [Video from «Inventory Gadget Tracker»](#) *(in Norwegian)*

Maintenance worker   **Nov. 2019 – Dec. 2022**
Anne & Lars Automatservice (UNO-X Norway)   Oslo/Akershus

- As a maintenance worker at Anne & Lars Automatservice (who deliver services for UNO-X Norway), my tasks revolved around maintaining and servicing UNO-X's gas stations in the greater Oslo-area.
- In addition to maintenance/service, I was also responsible for regulating UNO-X's prices based on the marked and competitive prices in the area, to always make sure UNO-X is "cheapest in the area" ("billigst der vi er").
